Major Food Allergens

CACFP iTrain
Simple Lesson Plan
Major Food Allergens

CACFP iTrain
Simple Lesson Plan

EXECUTIVE DIRECTOR
Aleshia Hall-Campbell, PhD, MPH

Intended Audience: CACFP personnel and other child care staff
Description: This lesson explains the nine common food allergens.

|      | ▶ Worksheets and Handouts:  
|      |   - Top Foods That Cause Allergies  
|      |   - Label Reading for the Common Allergens  
|      | ▶ Pens or pencils (one per participant) |
|      | ▶ Optional: Training Certificate/Evaluation/Feedback Form (one per participant) |

Prepare for Lesson

Before the training day:

- Review the training script and research any relevant State or local requirements.  
  - The content reflects the Federal regulations and/or national best practices or standards. However, it’s essential to include any additional State or local requirements when presenting this training.
- Make enough copies of the handouts for each participant.
- Test the PowerPoint on the computer and projector screen.
- Optional: Develop and print a session certificate/evaluation/feedback form (one per participant).

On the training day:

- Place pens or pencils on tables (one per participant).
- Distribute materials to each participant.

On the instructor’s table:

- Training Script
- Instructor’s copy of handouts and/or worksheets
- Optional: Session Evaluation/Feedback Forms

## Training Script

### Instructor's Note:
Each section below has an accompanying slide(s). Review and share the content for each PowerPoint slide.

### Introduction

**Welcome!**

Complete the following tasks:
- Distribute handouts to the participants.
- Welcome the participants to the training.
- Introduce yourself to the participants, and allow them to introduce themselves by sharing their name and one thing they would like to get from this training.

### Review Current Knowledge

**Ask posing questions:** Do you have any children in your child care program with food allergies? What foods are they allergic to?

### Overview

**Share core content:** Food allergies can be life threatening. Avoiding allergens keeps children safe. The purpose of this training is to discuss the nine most common allergens for children and to raise the child care center staff’s awareness of uncommon food sources of allergens. The training will address key information for limiting the risk of an allergic reaction due to a food allergy.

### Objective:

**Identify the nine common allergens.**

### Common Food Allergens

**Ask posing question:** What are common food allergens?

**Share core content:** Food allergies can happen from any food, but nine main foods cause the majority of problems for children. The major allergens are milk, eggs, wheat, peanuts, tree nuts, soy, fish, shellfish, and sesame. The food allergen could be a small amount left on a cutting board or a spoon. Start meal preparation and service with clean utensils.

### Reading Ingredient Statements

**Share core content:** People with food allergies have to make wise food choices through careful label reading. As a child care professional, check every label, every time you purchase and prepare the food for children with food allergies. Allergens are found in many foods. Manufacturers are required to list the ingredients and the presence of the eight major food allergens on the label.

**Note:** The FASTER Act expands what is considered a major allergen that has to be declared on a food label from eight to nine by adding sesame as a major allergen. This law will take effect in January 2023, but manufacturers may begin incorporating sesame as a major allergen on their food labels before this date. Contact the food manufacturer if there is any uncertainty about a food containing sesame.
Fish or shellfish (e.g., surimi, also known as “sea legs” or “sea sticks”), and Worcestershire sauce.

Some unexpected sources of fish are barbecue sauce, Caesar dressing, imitation or artificial products. Catfish, codfish, and tuna fish equally create problems. Also, avoid these fish products: fish oil and fish products. Fish from both fresh water and the sea cause allergic reactions in some children.

Share core content: Fish, both the whites and yolks, can be an allergen. Eggs frequently are used as an ingredient. Some common names on food labels are albumin (also spelled albumen), egg (dried, powdered, solids, white, and yolk), eggnoog, lysozyme, mayonnaise, meringue (meringue powder), ovalbumin, or surimi. Check labels carefully!

Wheat

Share core content: Wheat sources include bread, rolls, pastry, cookies, cake, and cereal made with wheat. Whole grain and refined wheat both cause allergic reactions. Avoid foods that contain wheat or any of these ingredients: bread crumbs, bulgur, couscous, flour (all-purpose, bread, cake, durum, enriched, graham, high-gluten, high-protein, instant, pastry, self-rising, soft wheat, steel ground, stone ground, whole wheat), pasta, and wheat (bran, durum, germ, gluten, grass, malt, sprouts, starch).

Some unexpected sources of wheat are processed meats, rice cakes, salad dressings, sauces, and soups. As a reminder, grain-based desserts are not reimbursable in the CACFP.

Peanuts

Share core content: Peanuts stand alone as a major allergen. Avoid foods that contain peanuts or any of these ingredients: Arachis oil (another name for peanut oil), artificial nuts, beer nuts, cold-pressed, expelled or extruded peanut oil, goobers, ground nuts, mixed nuts, nut meat, nut pieces, peanut butter, peanut flour, and peanut protein hydrolysate.

Tree Nuts

Share core content: Another allergen is tree nuts, which include pine nuts, chestnuts, hazelnuts, Brazil nuts, walnuts, almonds, cashews, pistachios, and pecans. Avoid foods that contain tree nuts or any of these ingredients: artificial nuts, natural nut extract, nut butters (e.g., cashew butter), nut distillates/alcoholic extracts, nut meal, nut meat, nut milk (e.g., almond milk, cashew milk), nut oils (e.g., walnut oil, almond oil, nut paste (e.g., almond paste), and nut pieces.

Soy

Share core content: Soy is added to many foods as a way to add protein or enhance flavor.

Fish

Share core content: Fish from both fresh water and the sea cause allergic reactions in some children. Catfish, codfish, and tuna fish equally create problems. Also, avoid these fish products: fish oil and fish sticks. Some unexpected sources of fish are barbecue sauce, caesar dressing, imitation or artificial fish or shellfish (e.g., surimi, also known as “sea legs” or “sea sticks”), and Worcestershire sauce.

Milk

Share core content: Milk allergens come from the protein in whole milk, 2% milk, 1% milk, skim milk, cream, yogurt, cheese, or ice cream. These items are obvious milk-containing foods. Other less obvious milk ingredients are casein, ghee, butter, curds, lactose, or whey.

Eggs

Share core content: Eggs, both the whites and yolks, can be an allergen. Eggs frequently are used as an ingredient. Some common names on food labels are albumin (also spelled albumen), egg (dried, powdered, solids, white, and yolk), eggnoog, lysozyme, mayonnaise, meringue (meringue powder), ovalbumin, or surimi. Check labels carefully!

Sesame

Share core content: Sesame is usually found in foods in the form of seeds or oil. A protein found in sesame is what causes an allergic reaction.

In 2021, the Food Allergy Safety, Treatment, Education, and Research Act (FASTER) was passed into law. This act expands what is considered a major allergen that has to be declared on a food label from eight to nine by adding sesame as a major allergen. This law will take effect in January 2023, but manufacturers may begin incorporating sesame as a major allergen on their food labels before this date. Contact the food manufacturer if there is any uncertainty about a food containing sesame.

Activity: Nine Common Allergens

Time: 10 minutes

Purpose: List and describe the foods that cause the most food allergies in children.

Materials Needed: Top Nine Foods That Cause Allergies handout

Instructions: Using the Top Nine Foods That Cause Allergies handout, identify foods you serve at your child care center that contain some of the major allergens. Go back over the major allergens and at the bottom of the page, write a food you serve that would be a combination of several allergens. For example, pizza contains milk, wheat, and sometimes soy.

Conclusion

Lesson Conclusion

Share core content: Nine major allergens create the majority of allergic reactions in children. The allergens are milk, eggs, wheat, peanuts, tree nuts, soy, fish, shellfish, and sesame. Several allergens can be found in the same menu item. Read labels carefully for allergens every time you purchase and prepare the food! Allergic reactions can be created with a large amount or a very small amount of the allergen. Remember that while this training only covers the nine major allergens, other foods can cause allergic reactions in children.

Ask posing question: What questions do you have concerning common food allergens?
Activity: Speed Action Planning  
Time: 5 minutes  

**Purpose:** The purpose of this activity is to establish future steps for applying the information in their workplace.

**Materials Needed:** Speed Action Planning worksheet, Planner or Cell Phone Calendar App, and Pencil/Pen

**Instructions:** Distribute the Speed Action Planning worksheet. Inform participants that it is important to develop a plan for using the training's information. Ask them to take 1–2 minutes to answer the following three questions to establish an action plan.

- What did you learn in this training?
- How will you apply this information in your current or future role?
- When will you apply this information?

Once the participants have finished, encourage them to save this goal to a planner, calendar app, or other sources to ensure they follow through with their plan. Following this activity, dismiss the participants from the training.

**Thank You!**

Complete the following tasks:
- Conclude the training.
- Refer participants to the Institute of Child Nutrition for additional information at helpdesk@theicn.org or 800-321-3054.
- Distribute any certificates or evaluations.

Reading Ingredient Statements for Food Allergens

Food Allergen Labeling

The Food Allergen Labeling and Consumer Protection Act is a Federal law that became effective January 2006. It mandates that the labels of foods containing the eight major food allergens be declared in plain language on the product. The FASTER Act of 2021 added sesame as the ninth major food allergen.

Nine Major Allergens:
- Egg
- Fish
- Peanuts
- Milk
- Shellfish
- Soy
- Tree nuts
- Wheat
- Sesame

Note that as long as there are no known allergies, it is important to offer and serve a variety of foods, including those identified as major allergens.

There are specifics on where and how the information is to be presented. The food ingredient MUST be in the ingredient in parenthesis following the ingredient or written as the usual name of the major food allergen or listed after the ingredient list by stating product “Contains” the particular allergen.

“Contains” followed by the name
Example: “Contains: milk and wheat”

Parenthetical statement or usual name in the list of ingredients
Example: “wheat flour and albumin (egg)”

Precautionary Labeling

There is another type of allergy labeling called precautionary labeling. This type of labeling is NOT covered in the Food Allergen Labeling and Consumer Protection Act, so it varies widely from manufacturer to manufacturer. One type of precautionary labeling is the “May Contain” statement. Other types of precautionary labeling are the “Made on Equipment” and “Processed in Facilities” statements.

“May Contain” statement
Example: “May contain traces of peanuts”

“Made on Equipment”
Example: “Made on equipment that makes products containing eggs and tree nuts”

“Processed in Facilities”
Example: “Processed in facilities that also process wheat.”

Reading Ingredient Statements

Ingredient statements should be read when the product is received since suppliers may make product substitutions, formulas may change, or vendors could change. Check all labels carefully every time. Do not rely on specifications, fact sheets, or the last shipment. Read the label each time the product is received. Contact the manufacturer if you have any questions or are uncertain about the food item.

Holding Labels

It is recommended that labels of all products served be kept for 24 hours as a precaution, so the label is available in case someone has an allergic reaction. Unlike a foodborne illness outbreak,

Speed Action Planning

Instructions: Today’s training featured key information on the nine common food allergens. Answer the following three questions to establish a plan for using the information.

1. What did you learn in this training?

2. How will you apply this information in your current or future roles?

3. When will you apply this information (e.g., one week, one month, six months, etc.)?
